SUMMARY

Junior Frontend Developer currently based in Warsaw. My tech stack includes React, JavaScript, TypeScript, HTML, CSS, Next.js, Node.js, Git, and MongoDB. I have experience building responsive and adaptive websites, single page applications and multi-page web applications. I have built projects from scratch, worked with existing REST APIs, and created custom API endpoints to enable seamless frontend-backend communication. I am familiar with the software development lifecycle and version control using Git. I enjoy turning ideas into real products and continuously improving my skills. I'm currently looking for opportunities to grow as a developer, collaborate with experienced teams, and contribute to meaningful products.

EDUCATION & EXPERIENCE

1. The Joy of React — by Josh W. Comeau

12/2025 – 05/2026

- An interactive React.js course focused on building a deep understanding of React and applying modern development best practices.
- Key topics included React and JavaScript Fundamentals, State Management, React Hooks, Component API Design, and Next.js.

2. CSS for JavaScript Developers — by Josh W. Comeau

12/2025 – 06/2026

- An advanced CSS course that goes beyond the fundamentals, focusing on how CSS works under the hood and how to build scalable, maintainable user interfaces.
- Topics included modern layout techniques, responsive design, animations, and best practices for writing efficient, production-ready CSS.

3. Web Developer Program — Yandex Practicum

09/2021 – 06/2022

- A comprehensive 10-month web development bootcamp covering HTML, CSS, JavaScript, and React.
- The program included multiple large-scale projects and a final graduation project, all reviewed and evaluated by mentors.
- In addition to technical skills, the course provided hands-on experience with industry-standard workflows, code reviews, and real-world development practices.

PET-PROJECTS:

1. **Pet-Care** - is a multi-page pet health management application featuring user authentication, pet profiles, treatment and symptom tracking, notifications, and personalized account settings.

2. **Pet-Store** - multi-page React application built from a Figma design mockup. The project focuses on pixel-perfect implementation and responsive layouts. Application including components with advanced layout compositions combining text, images, and interactive elements.

3. **Real Estate Landing** - a responsive real estate landing page built from an AI-generated Figma design. The project focuses on pixel-perfect development, semantic HTML, component-based architecture, and adaptive layouts across multiple screen sizes.

4. **WishList** (work in progress) - a project inspired by many of the concepts implemented in my other project Pet Care. Its primary goal is to deepen my experience with Next.js while building a fully functional application using modern frontend development practices.

5. During my web development courses, I worked on a variety of applications, including social networking platforms, movie catalogs, pet adoption services, task management tools, and other projects that helped me develop and strengthen my frontend development skills.

SKILLS

React, JavaScript, TypeScript, HTML, CSS, Next.js, Node.js, Git, MongoDB.
